possibility of refinishing
warmth / character

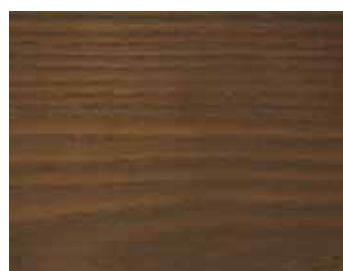

Wood decking is increasingly popular solid wood flooring for terraces, balconies, gardens as well as for pool decks. Wood suitable for outside decking is resistant to decay, insects and mould due to its natural inherent substances or thermal treatment without the use of any harmful chemicals. It thus proves to be completely undisputed from the ecological point of view and it can last 25 years or more without any special maintenance. With age the wood will mellow to an attractive silver patina. However the age-related progress of wood deterioration can be slowed down by the use of natural teak oil finishes. Such naturally durable decking requires very little or no maintenance. It certainly enriches every outdoor surface and provides its users with luxurious warmth and softness. It is available in the following highly distinguished timbers: **ipe/lapacho, teak, sibirian larch, cumaru, masaranduba, merbau...** Decking is available in various lengths, widths and thicknesses, either in plain or grooved anti-slip deckboards.

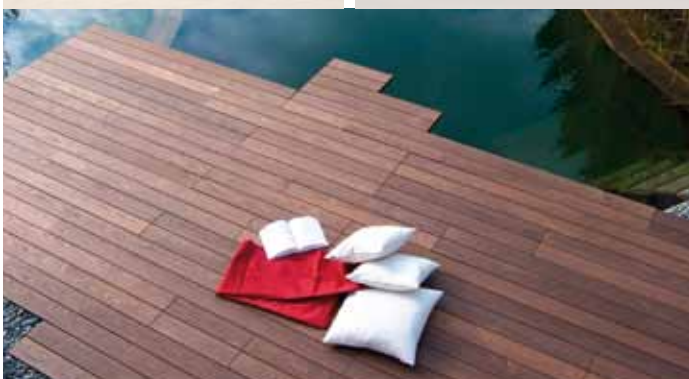

Our offer of wood floorings also comprises wood decking tiles that can be fitted to a wooden or synthetic base. The tiles enable unlimited possibilities of patterns and allow the customers to express themselves and create an individual deck design.
